

WHO WE ARE

We are a fellow farmer located in the heart of Southern Ontario.

The goal of our farm is to replace high-cost feed additives with highly digestible meal to reduce feed cost and simplify the diet

We are offering:

- ✓ custom soybean extrusion
- ✓ custom corn extrusion
- ✓ fast loading and unloading
- ✓ App to book loads to fit your schedule

EXPRESS MEAL FOR LAYERS

Improve feed conversion and
simplify your diet

EXPELLER MEAL VS SOLVENT BEAN MEAL

SOLVENT BEAN MEAL (SBM)

- Hexane (a chemical solvent) is used to extract oil from the beans
- SBM Feed Value:
47.5% crude protein and < 1 % fat

EXPRESS MEAL

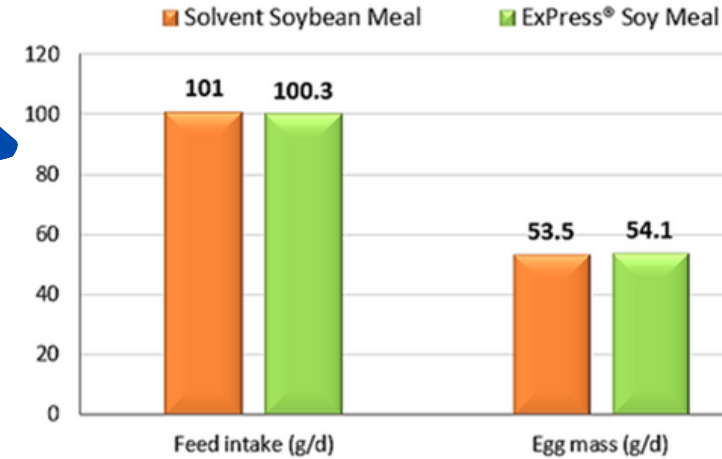

- A combination of Heat and Mechanical pressure is used to remove oil
- Express Meal Feed Value:
44% - 46% crude protein
and 6 - 8% crude fat
- Trypsin inhibitors are removed with heat without traces of chemicals

BENEFITS OF EXPRESS MEAL

- Feed intake declined while egg mass slightly increased
- High amino acid digestibility and energy digestibility
- Farmers can reduce synthetic amino acids in their diet
- The bird will still require additional rich protein ingredients to meet amino acid requirements
- Farmers can remove oil and fat additives
- Process preserves nutrients and natural preservatives leading to longer product shelf life.
- Batch-to-batch consistency leading to increased palatability

CASE STUDY

- Study shows birds consume 80 fewer grams of feed of 22-37 weeks
- No external fats and oils need to be added
- Better feed conversion and higher egg mass relative to intake
